

**ABSTRACT OF THE DISCLOSURE**

A wireless terminal device having network access. Selection of menus is simplified by allowing selection of more than one input such as direct touching of the screen, virtual keyboards or roller buttons. A focus marker in the form of a border around a field may be used to limit the area of selection. An object menu icon is visible without needing a right click of a mouse to make selection of the menu easier. The selection of options is localized and parsed before a response to the user selection is sent back to the terminal.
